EXECUTIVE SUMMARY

HDR Engineering, Inc. (HDR) has conducted a Phase I Environmental Site Assessment (ESA) for the two proposed design options for the Central Mesa Light Rail Transit (LRT) project’s Locally Preferred Alternative (LPA). The LPA is located along Main Street from Sycamore Drive to approximately Hobson Road in Mesa, Maricopa County, Arizona (hereafter referenced as the project area). The project area consists of both of the project’s design options (a 2-lane and a 4-lane option), and the potential locations for new station platforms. In addition, potential locations for the traction powered substations (TPSS) are also located within the project area. In order to account for each potential station platform and TPSS location, the project area and a one-half mile surrounding buffer were evaluated for the presence of potential hazardous waste sites for the purposes of this ESA (See Appendix A). Land use within the project area consists of various generations of retail and commercial development, including several auto repair facilities, current and former service stations, auto dealerships, shopping centers, business offices, and other retail and commercial facilities. Land use in the surrounding area is consistent with that of an urban (downtown) area, and appears to have been developed since at least the late 1950s.

This Phase I ESA identifies recognized environmental conditions (RECs) for the project area that may adversely affect roadway/fixed guideway construction or project corridor right-of-way acquisition. Figures depicting each REC site, and other identified sites of concern, can be found in Appendices A and B. All identified sites are referenced with corresponding map codes within the text of this report. This ESA was conducted to generally conform with the scope and limitations of the American Society for Testing and Materials (ASTM) Practice E 1527-05, and in compliance with the National Environmental Protection Act (NEPA) requirements for the project. Any exceptions to or deletions from these ASTM practices are described later in this report. The reader is also referred to Sections 1.3 and 1.4 of the report for further information about many of the major terms used in this summary and report.

This ESA includes a summary of the site reconnaissance conducted on November 10, 2009, a review of environmental databases, and a review of historical data sources. Interviews with individual property owners or facility managers were not authorized by the client.

The ESA process resulted in the following findings and conclusions:

- For the purposes of this ESA report, conclusions regarding potential sites of concern were not affected by the 2-lane or 4-lane design options. However, the location of potential station platforms and TPSS were a determining factor in identifying sites of concern. This determination was based on the increased amount of subsurface disturbance required for the construction of the station platforms and TPSS.

The EDR report identified 11 sites of concern to the project. The analysis of the EDR database search is not affected by the 2-lane or 4-lane option. However, location of potential station platform and TPSS was a factor. Many of the sites listed in the EDR report were eliminated as sites of concern based on the distance from a potential station platform or TPSS. Only sites located within a 200-foot radius of a station platform or TPSS were considered to be of concern to the project. Based on the location and distance of a listed site, current status of the listing, and/or nature of the database, seven leaking underground storage tanks (LUST) sites and three...
additional underground storage tank (UST) sites were identified as sites of concern in the EDR report. One additional site with multiple database listings was identified in the report. Of the 11 sites identified in the EDR report, nine are considered to be RECs (seven LUST sites [map codes C, D, E, I, M, O and R] one facility with multiple regulatory listings [map code N] and one former dry cleaner [map code K]. All maps are included in Appendices A and B).

- **Historical research (city directories and historic aerial photographs) of the project area identified 11 additional sites of concern.** The analysis of historical research information is not affected by the 2-lane or 4-lane option. However, distance from a potential station platform and/or TPSS was a factor in determining whether a city directory listing was considered to be of concern. Of the 11 sites identified through historical research, one site, a former service station and current auto repair facility (map code U), is considered a REC.

- A site reconnaissance of the project area was performed for the project area. Development within the project area consisted of service stations, auto repair facilities, auto dealerships, mobile home parks, hotels and motels, shopping plazas, office buildings and other miscellaneous retail and commercial facilities. The project area consisted of newly constructed structures, as well as structures present since the at least the 1950s. The site reconnaissance findings were not affected by the 2-lane or 4-lane option. However, distance from a potential station platform and/or TPSS was a factor in determining whether a site identified in during the visit was considered to be of concern. One site of concern, a former service station not previously identified in the EDR report or historical research, was identified during the site reconnaissance (map code J).

HDR has performed an ESA in general conformance with the scope and limitations of ASTM E 1527-05 of the project area located along Main Street, from Sycamore Drive to approximately Hobson Road in Mesa, Maricopa County, Arizona. Any exceptions to or deletions from these practices are described in later sections of this report. This report has revealed the evidence of ten RECs in connection with 23 sites of concern located in the project area (11 sites identified in the EDR, 11 sites identified in the historical research, and one site identified during the site reconnaissance). The following table identifies each of the 23 sites of concern, with the REC sites in bold print. Further information, including photographs for each site, may be found in Appendix D.

Sites listed in bold print are considered by ASTM to be Recognized Environmental Concerns (RECs)

1. Corresponds to location of site as indicated in Appendices A and B
2. Address corresponds to that listed in EDR database search or historical source that identified site. Given address may differ slightly from currently listed address.
3. CSS = Current Service Station, FSS= Former Service Station, HSS = Historic Service Station (no longer present)
4. LUST=Leaking Underground Storage Tank, UST= Underground Storage Tank. Complete list of acronyms identified in EDR report in Appendix C
5. Indicates primary information sources for listing: R=Reconnaissance, D=Database, H=Historical Source (city Directories, historical aerial photographs)
6. Risk of potential impacts onsite, Low / Medium / High / Indeterminate
7. PSI= Preliminary Site Investigation
8. SP= Station Platform, TPSS= Traction Powered Substation. See Appendix B for specific structure
Based on the findings and conclusions reached in this report, HDR makes the following recommendations:

**Recommendation 1:**

HDR recommends further investigation (in the form of a Preliminary Site Investigation) at seven of the ten REC sites. Additional investigation for these sites is based on the location of known or suspected contamination and/or other details associated with the site’s regulatory listing. A drilling and sampling program should be implemented to verify or refute the existence of actionable concentrations of released hazardous materials. A specific and targeted analytical program should be implemented to determine the concentration of residual impacts, if present.

**Recommendation 2:**

HDR recommends that Environmental Construction Monitoring (ECM) be conducted along the entire length of project area based on the potential for contamination within the soil resulting from the operations of the facilities surrounding the project area. Additionally, all construction contractors should be instructed to immediately stop all subsurface activities in the event that potentially hazardous materials are encountered, an odor is identified, or significantly stained soil is visible. Contractors should be instructed to follow all applicable regulations regarding discovery and response for hazardous materials encountered during the construction process.
1.0 INTRODUCTION

1.1 Purpose and Involved Parties

This ESA documents the evaluation of the project corridor for indications of “recognized environmental conditions.” A recognized environmental condition (REC) is defined by ASTM Practice E 1527-05 as: “The presence or likely presence of any hazardous substances or petroleum products on a project site under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the project site or into the ground, groundwater, or surface water of the project site. The term includes hazardous substances or petroleum products even under conditions of storage and use in compliance with local and state laws and regulations. In the event that a site’s regulatory issue has been resolved by the regulatory agency with jurisdiction, that site may be classified as a “Historic REC”. This classification means that although the issue has been resolved to the satisfaction of the regulatory agency, a possibility exists that residual contamination may be present at the site. The terms “REC” and “Historic REC” are not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of regulatory agencies. Conditions determined to be de minimis are not recognized environmental conditions.”

HDR Engineering, Inc. (HDR), received authorization from Valley Metro Rail Inc., (METRO) to conduct an ESA for the project area located along Main Street, from Sycamore Road to approximately Hobson Road in Mesa, Maricopa County, Arizona. This ESA has been prepared for METRO, and only METRO has the right to rely on the contents of this ESA.

1.2 ESA Methodology

HDR employs a relative risk ranking system that includes several investigation elements. Each element of the investigation process uses a different set of data sources to assess the risk of hazardous materials being present in association with a specific site or location.

Once the elements of the investigation process were completed, HDR categorized identified sites using a subjective risk ranking system, classifying the sites as low-risk, moderate-risk, high-risk, or indeterminate. The following paragraphs provide general descriptions of each category.

The ESA was designed to generally comply with the level of documentation recommended in the ASTM standard (ASTM E 1527-05) for the performance of ESAs. Deviations from the ASTM standard included deletion of certain records sources determined to be inapplicable or of limited value to the specific needs of this project. In accordance with our contracted scope of work, HDR did not conduct interviews with specific site property owners or business operators.

HDR included the three primary activities included in the ASTM guidance (conforming to EPA’s All Appropriate Inquiry (AAI) requirements), namely (1) records review, (2) site reconnaissance, and (3) preparation of this report.
Low-risk sites are those sites that have few indications of potential for release of hazardous materials. On some occasions, sites that have had a hazardous materials issue in the past but have been remediated with approval of the local state environmental agency (or EPA) may qualify as low-risk. Examples of low-risk sites include undeveloped or agricultural property, residential property, or benign commercial properties such as office buildings, warehouses, distribution facilities, or municipal facilities with no listed violation.

Moderate-risk sites are those sites that have some indications of possible hazardous materials issues. A moderate-risk site may appear on a database as having a permit to handle hazardous materials, but has recorded no violations to date. Another way that a site could be interpreted as moderate risk would be if the environmental records search indicated no listing, but the site is an auto repair facility with visible surface staining. Examples of moderate-risk sites include auto repair garages, welding shops, or manufacturing facilities with minor listings in the environmental database.

High-risk sites are those sites that have a high potential for releasing hazardous materials to the soil or groundwater, or have a recorded release issue. Examples of high-risk sites include current service stations, bulk fueling terminals, sites listed in environmental databases as having had a release, or a known release that has not been remediated.

Indeterminate-risk sites are those which, at the time of report preparation, did not include sufficient information to include a high, medium or low ranking. Indeterminate sites often require additional file review to determine the details of any related environmental issues at the site.

When HDR assigns a risk ranking to a site, the risk ranking criteria are reviewed and concurred with by at least one Environmental Professional as defined in ASTM. It is HDR policy to have subjective criteria cross-reviewed for accuracy and adherence to its assessment protocols and internal quality assurance standards. It is worthwhile to note that risk ranking does not directly correspond to whether a site qualifies as a REC; rather, the risk ranking system is intended as a method of categorizing sites on large projects for consideration of common contamination characteristics.

1.3 Scope of Services, Significant Assumptions, and Limitations

The services provided for this project consisted of the following:

- Provide a description of the project site including current land uses.
- Provide a general description of the topography, soils, geology, and groundwater flow direction.
- Review reasonably ascertainable and reviewable regulatory information published by federal, state, local, tribal, health, and/or environmental agencies pertaining to the project site.
- Review historical data sources for the project site, including aerial photographs, topographic maps, fire insurance maps, city directories, and other readily available development data.
- Conduct an area reconnaissance and an environmental review—including a visual inspection of adjoining properties—with a focus on indications of hazardous substances, petroleum products, polychlorinated biphenyls (PCBs), wells, storage
tanks, solid waste disposal pits and sumps, and utilities.

- Prepare a written report of methods, findings, and conclusions.

The goal of this scope of services is to assist the user in identifying conditions near the project site that may indicate risks regarding hazardous materials storage, disposal, or other impacts. The resulting report may qualify the user for relief from liabilities as one of three “defenses” identified in the 2002 Brownfields Amendments to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 9607 (AAI subsections). These three defenses include:

2. The “contiguous project corridor owner” defense pursuant to 42 U.S.C. § 9607q
3. The “bona fide prospective purchaser” defense pursuant to 42 U.S.C. § 9607r

Federal regulations at 40 Code of Federal Regulations [C.F.R.] Part 312, promulgated by EPA, require that liability release be based (in part) on completion of AAI prior to purchase of a property. Those inquiries are documented by Phase I reports, or ESAs. EPA has agreed that the recently developed ASTM guidance (ASTM Practice E 1527-05) specifies and interprets AAI requirements.

A user is defined by ASTM Practice E 1527-05 as the party seeking to use Practice E 1527 to complete an ESA of the project site and may include a potential purchaser of land at the project site, a potential tenant of the project site, an owner of land at the project site, a lender, or a project area manager. Investigative areas not included in the standard ASTM ESA scope include: asbestos, lead-based paint, lead in drinking water, radon, urea formaldehyde, wetland issues, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high voltage power lines. The scope of services for ESA projects also does not include the completion of soil borings, the installation of groundwater monitoring wells, or the collection of soil or groundwater samples. Likely sources of vapor intrusion, from potential on-site or off-site sources, are identified. State and national policies and standards relevant to vapor intrusion are in flux and subject to change.

HDR has made certain assumptions in preparing the scope of this assessment:

- Data gathered from public information sources (i.e., libraries or public regulatory agencies) are accurate and reliable.
- Site operations reflect site conditions relative to potential releases, and no intentional concealment of environmental conditions or releases has occurred.
- Interview information (where applicable) is directly reported as gathered by the assessor and is limited by the accuracy of the interviewee’s recollection and experience.
Published geologic information and site observations made by the environmental professional are used to estimate likely contaminant migration pathways in the subsurface. These estimates by the environmental professional are limited in accuracy and are generally cross-referenced with existing information about similar sites and environmental releases in the area.

Regulatory information is limited to sites discovered after the late 1980s because reliable records were not kept by regulatory agencies prior to that time frame.

Where a REC has resulted from historical uses or conditions, but apparently no longer persists at the site, the term “historical REC” is used.

The findings and conclusions presented in this report are based on the procedures described in ASTM Practice E 1527-05, informal discussions with various agencies, a review of the available literature cited in this report, conditions noted at the time of this ESA, and HDR’s interpretation of the information obtained as part of this Phase I ESA. The findings and conclusions are limited to the specific project and properties described in this report, and by the accuracy and completeness of the information provided by others.

An ESA cannot entirely eliminate uncertainty regarding the potential for RECs. Conducting this assessment is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a project site within reasonable limits of time and cost. In conducting its services, HDR used a degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession practicing in the same locality. No other warranty is made or intended. This ESA generally conforms to the level of documentation required in ASTM Practice E 1527-05. Deviations from the ASTM standard included deletion of certain records sources deemed to be inapplicable, or of limited value, to the specific needs of this client.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The project area is located along Main Street, from Sycamore Drive to approximately Hobson Road in Mesa, Maricopa County, Arizona. The project area consists of the project’s design from Sycamore to Country Club as well as the two design options (a 2-lane and a 4-lane option) from Country Club to the eastern project terminus, potential locations for new station platforms, and the park-and-ride lots. The project area also includes the potential locations for the project’s four station platforms and the three traction power substations (TPSS). In addition to the approximately 3.1 mile-long segment of Main Street, the ESA included the evaluation of an approximately one-half mile buffer surrounding Main Street. The purpose of the buffer is to identify sites that have the potential to affect subsurface media for a larger area beyond just the properties located directly adjacent Main Street. The project area is located in Sections 20, 21, 22, and 23 of Township 1 North, Range 5 East. Figures showing the location of the project area can be found in Appendix A. Additional images depicting potential station platform and TPSS locations can be found in Appendix B. Sites of concern are presented in both appendices with corresponding HDR map codes as referenced in this report.
2.2 Site and Vicinity Characteristics

According to the United States Geological Survey 7.5 minute series quadrangle maps for Mesa, Arizona, 1952 (photorevised 1982), the elevation of the project site is approximately 1,240 feet above mean sea level. The topography near the project area is relatively flat, rising gently in the east toward the Superstition Mountain Range. According to the Arizona Department of Water Resources, depth to groundwater in the vicinity of the project area ranges from approximately 140 to 180 feet below ground surface (bgs). Shallower, discontinuous perched groundwater zones have been reported in the project vicinity.

2.3 Description of Structures, Roads, and Other Site Improvements

The project area consists of various generations of retail and commercial development, including several auto repair facilities, current and former service stations, auto dealerships, shopping centers, business offices, and other retail and commercial facilities. Land use in the surrounding area is consistent with that of an urban (downtown) area, and appears to have been developed since at least the late 1950s. The East Valley Institute of Technology is located on the south side of Main Street, at the western end of the project area. The development along Main Street and the surrounding area is multi-generational, and consists of both occupied and vacant properties. Main Street is a paved, multi-lane roadway that is divided by a landscaped center median. Intersecting roadways are also paved, with a minimum of two-lanes. The surrounding area consists of similar retail and commercial development, and an increased concentration of residential development to the north and south of Main Street, as well as east of the project area.

2.4 Area Geology and Hydrogeology

The project area is located within the Basin and Range Physiographic Province of central and southern Arizona. The area is characterized by broad valleys between north-south-trending mountains of the province. The area is comprised of late and middle Pleistocene surficial deposits with alluvium in the broad basins generally underlain by thick sequences of coarse gravel, sand and silt. Deep alluvial basin fill potentially has been subject to agricultural, industrial and residential modification.

3.0 USER-PROVIDED INFORMATION

METRO provided HDR with documents identifying the location of the project site. Neither a survey map nor property zoning information was provided. The user did not provide information indicating that it has any specialized information for the project area pertaining to land use, previous environmental cleanups, previous chemical spills or releases, purchase price of any properties within the area or cleanup liens against properties within the project area.
4.0 RECORDS REVIEW

4.1 Environmental Records Review

Environmental Data Resources, Inc. (EDR) was contracted by HDR to complete a database search for the project area, which included a buffer zone of one-half mile from the project’s centerline. The database search was produced by EDR on November 3, 2009 and included federal, state, local, and tribal databases, as well as EDR proprietary databases, as defined by ASTM E 1527-05. The results of the database search are summarized in the following table and paragraphs. A complete copy of the EDR environmental database report is included in Appendix C. Site data forms and a summary data table describing each of the sites of concern is included in Appendix D.

Within an urban area, it is anticipated that commercial operations will increase the number of listings in a database search. Many of the database findings, however, are not considered to be of concern to the project due to the scope of the project, the distance of the listed site from the project area, and/or a facility’s compliance with any previously noted violation(s). Additional database findings are not considered to be of concern to the project due to the nature of the database. For example, incidents listed on the Emergency Response Notification System (ERNS) database are responded to by local emergency responders at the time of the incident, and often do not require further action.

In addition, many of the sites identified in an EDR report are listed in multiple databases. The redundant listings, combined with the urban setting, and a one-half mile search radius has resulted in over 300 listings identified in the EDR report. HDR reviewed the types of database listings and focused on those within the project area that were likely to result in, or were confirmed to have soil, groundwater or surface water contamination. The results of the database search are summarized in Table 1 and Section 4.2.

(1) Note that total listings do not correspond to total sites since some individual sites are listed on more than one database.

4.2 Summary of Listed Records

The EDR report identified 346 listings relevant to the project area based on the above mentioned criteria. Many of the sites listed are included in more than one database; therefore, the number of database listings does not match the total sites counted. The analysis of the EDR database search is not affected by the 2-lane or 4-lane option. However, location of potential station platform and TPSS was a factor. Many of the sites listed in the EDR report were eliminated as sites of concern based on the distance from a potential station platform or TPSS. Only sites located within a 200-foot radius of the station platforms or TPSS sites were considered to be of concern to the project. It has been the experience of HDR personnel that the contamination migration pattern within the geology such as that of Mesa, Arizona are not likely to impact an area farther than 200 feet from the contamination source. Based on the location and distance of a listed site, current status of the listing, and/or nature of the database, 14 listings (corresponding to 11 sites of concern) were identified in the EDR report. Figures depicting each identified site of concern can be found in Appendices A and B. All identified sites are referenced with corresponding map codes within the text of this report. Appendix B includes figures depicting the specific station platform and/or TPSS (named in parentheses) affected by the site of concern. Regulatory files for each site were reviewed at the Arizona Department of Environmental Quality.

The majority of the listings at each site correspond to an underground storage tank (UST) or leaking underground storage tank (LUST) case(s). It has been the experience of HDR personnel that hydrocarbon contamination often exists in the soils surrounding USTs not otherwise classified as a LUST. Similarly, HDR personnel have often found residual and sometimes
significant contamination in the soils surrounding a closed LUST case. Based on this experience, the following eleven sites are considered to be of concern to the project:

- **Circle K**, located at 1145 W. Main Street (Exhibit A-1, HDR Map Code B, Alma School station platform). Three underground storage tanks (USTs) are located onsite. The site is considered high risk based on the presence of USTs onsite; however, risk is associated with property acquisition only.

- **Big Two Oldsmobile**, located at 1120 W. Main Street (Exhibit A-1, HDR Map Code C, TPSS A-1). According to regulatory files reviewed for the facility, one UST was removed from the site in 1991 and one LUST case was opened in 1991 and closed in 1993. The vertical extent of the leak was defined at approximately eight feet, but no lateral boundary was defined. The LUST case was closed with residual soil contamination remaining onsite. The location of the leak is located directly adjacent to the potential location of TPSS A-1. Based upon the location of the leaking tank and potential for residual contamination in the area, this site is considered high risk. **Additional investigation is recommended at this site in the event that TPSS A-1 is selected for construction.**

- **Chevron (currently Fractured Fiberglass)**, located at 1100 W. Main Street (Exhibit A-1, HDR Map Code D, TPSS A-1). According to regulatory files reviewed for the facility, one LUST case was opened at the facility in 1994 and closed in 1996. Seven USTs were previously located at the site, two were removed in 1972 and five were removed in 1994. The LUST case was closed with residual soil contamination remaining onsite. The location of the LUST soil contamination is in the immediate vicinity of TPSS A-1. Based upon the location of the leaking tank and potential for residual contamination in the area, this site is considered high risk. **Additional investigation is recommended at this site in the event that TPSS A-1 is selected for construction.**

- **Darner Motors**, located at 837 W. Main Street (Exhibit A, HDR Map Code E, TPSS A-4). One LUST case was opened for the facility in 1995 and closed in 1996. One UST was removed in 1994. According to the site’s regulatory files, soil samples analyzed after cleanup activities were completed and were free of residual contamination. The site is rated as a high risk since a LUST case was previously reported; however, based on the results of the soil sample analysis subsequently conducted at the site, no further investigation is recommended.

- **Chevron (currently Taco Bell)**, located at 310 W. Main Street (Exhibits B-1, B-2, B-4, HDR Map Code I, Country Club Drive Station Platform [all platform configurations shown in exhibits]). Three LUST cases were opened for the facility in 1992, 1995 and 1999. The cases were closed in 2003, 2002 and 2003 respectively. Eight USTs were removed from the site between 1992 and 2004. Regulatory files identified the location of the leak to be within 30 feet of Main Street. Additionally, the site’s LUST case was closed with residual levels of total petroleum hydrocarbons (TPH) contamination remaining onsite. The site is considered high risk based on the presence of a LUST case at the site. **Based upon the location of the leaking tanks and potential for residual contamination in the area, additional investigation is recommended at this site.**

- **Falcon Cleaners**, located at 15 S. Country Club Drive (Exhibits B-1, B-2, B-4, HDR
Map Code K, TPSS B-1). The site, a former dry cleaner, had one UST removed in 1992. According to regulatory files, no LUST case was opened at the site; however, petroleum hydrocarbons and volatile organic compounds (VOCs) were detected in the soil surrounding the tank. The tank was identified as a 55-gallon drum. Based on the limited amount of information available for the site, the site is considered to be of indeterminate risk. Additional investigation is recommended at this site in the event that TPSS B-1 is selected for construction.

- **Pit Stop**, located at 201 W. Main Street (Exhibit B-4, HDR Map Code M, Country Club Drive station platform [all platform configurations shown in Exhibits B-1 through B-4]). One LUST case was opened for the facility in 1992 and closed in 2006. Three USTs were removed from the site in 1993. File review identified a 240-foot lateral boundary for TPH soil contamination resulting from the LUST at the site. The boundary for contamination extends onto Main Street and into the area of the Country Club station platform. Files identified residual levels of soil contamination remaining onsite. The site is considered high risk based on the presence of a LUST case at the site. Based upon the extensive lateral boundary for soil contamination at the site and potential for residual contamination in the area, additional investigation is recommended at this site.

- **AAMCO Transmissions**, located at 27 S. Robson Street (Exhibit B-4, HDR Map Code N, TPSS B-4). The site is listed in numerous regulatory databases including the SHWS, CERCLIS-NFRAP, SPILLS, and RCRA NON-GEN (with violations). No closure data is included in the SHWS listing. A compliance order was issued as a result of the RCRA violations. Violations at the site were in response to the mishandling of drums containing hazardous waste, including trichloroethylene (TCE) and tetrachloroethylene (PCE). Additionally, soil contamination was identified when the secondary containment for a waste oil UST was found to be filled with approximately 350 gallons of waste oil during the tank removal. The secondary containment was noticeably cracked and material was leaking into surrounding soil. A Remedial Site Assessment conducted at the site identified VOCs in irrigation and monitoring wells in the area, and TPH soil contamination at the site. Although classified as a CERC-NFRAP, the 2003 site assessment report identified TPH contamination in the soil is likely to exist at the site. Based on the numerous listings and RCRA violations, the site is considered high risk. Additional investigation is recommended at this site in the event that TPSS B-4 is selected for construction.

- **Firestone (current office buildings)**, located at 48 E. Main Street (Exhibits C-1, C-2, HDR Map Code O, Centennial Way station platform). One LUST case for the facility was opened and closed in 1996. One UST was removed in 1996. According to the site’s regulatory files, soil samples analyzed after remediation activities were clean of contamination. The site is rated as a high risk since a LUST case was previously reported; however, based on the results of the soil sample analysis subsequently conducted at the site, no further investigation is recommended.

- **Zion Bank (current Jack in the Box)**, located at 62 E. Main Street (Exhibits C-1, C-2, HDR Map Code P, Centennial Way station platform). One UST was removed from the site in 1991. However, based on the likelihood that hydrocarbon contamination
often exists in the soils surrounding USTs not otherwise classified as a LUST, the site is still considered low risk.

- **Brown and Brown Chevrolet**, located at 145 E. Main Street (Exhibits C-1, C-2, HDR Map Code R, Centennial Way station platform). One LUST case was opened and closed at the site in 2000. Six USTs were removed from the site in 1992, and one UST in 1998. Regulatory file review identified that the location of the leak at the site was at the far southern end of the facility, and the lateral extent of soil contamination to extend only 10 feet from the leak site. The site is rated as a high risk based on the presence of a LUST case at the site. However, based on the location of the leak and the minimal lateral extent, no further investigation is recommended for this site.

### 4.3 Historical Use Information

The objective of reviewing historical use information is to develop a history of previous land uses in the vicinity of the project site and to assess these uses for potential hazardous materials impacts that may affect the project. HDR reviewed those historical sources that were readily available and reviewable and likely to provide useful information, given the time and cost constraints inherent in ESA projects.

**Fire Insurance Maps**

Fire insurance maps are produced by private fire insurance companies to indicate uses of the project site on specified dates. HDR requested fire insurance maps from EDR, the copyright holder for the Sanborn map collection; however, no Sanborn fire insurance map coverage exists for the project site.

**Historical Aerial Photographs**

Historical aerial photographs are valuable for the environmental assessor to review features of properties near the project site over a long period of time. HDR reviewed historical aerial photographs at the Burton Barr Phoenix Public Library's Arizona Room in Phoenix, Arizona. Historical aerial photographs were reviewed for the years 1957, 1968, 1970, 1976, 1980, 1984, 1989, 1993, 1998, 2002, 2004 and 2007. Information relating to observed features is presented below. Figures depicted each site listed below can be found in Appendices A and B, with corresponding map codes referenced.

**1957** – The project area consisted of agricultural land (west of Alma School), residential developments (primarily mobile home parks), and retail and commercial facilities. The majority of Main Street was developed, with few undeveloped properties. The Mesa Arizona Temple located at the eastern end of the project area was present. The historic/former service stations located at the Extension Road, Country Club Drive and Main Street intersections (HDR Map Codes D, H, I and J) were present; however, the former service station at the southeast corner of Country Club Drive and Main Street (Map Code J) was configured differently than it is currently. The historic/former service stations located at the Centennial Way and Main Street intersection (HDR Map Codes P and Q) were also present, as well as the sites at the Mesa Drive and Main Street intersection (Map Codes S, T, U, V, and W).
1968 – The project area’s development was similar to that of the previous image. The service station at the southeast corner of Alma School and Main Street (Map Code B) was present. Multiple auto dealerships were located along Main Street, including Darner Motors (Map Code E) and Brown and Brown Chevrolet (Map Code R).

1970s – No significant changes were noted from the late 1960s to the early 1970s. One exception included the change of the service station at the southeast corner of Country Club Drive and Main Street (Map Code J) to its current configuration. The western portion of the project area remained agricultural land. By the mid-1970s, an increased number of undeveloped lots were identified along Main Street, east of Extension Road.

1980s – The agricultural land located at the western end of the project area was still present, however, in a smaller area. Additional development was present to the west of Alma School Road. Many of the vacant lots identified in the 1970s were developed with retail/commercial structures in the mid-1980s. The apartment complex located on the north side of Main Street (west of Extension Road) had been developed by 1984. By 1989, construction in the agricultural fields at the western end of the project area had begun.

1990s – By the early 1990s, several large, high rise commercial buildings were present at the eastern end of the project area (Center Street and Centennial Way intersections). By the mid-1990s development of the project area west of Alma School Road had also begun. Some structures on the north side of Main Street and east of Robson Road (west of Mesa Drive) were no longer present beginning in the late 1990s.

2000s – Development at the southwest corner of Alma School Road and Main Street was present in the early 2000s (Map Code A). By the early 2000s development had begun at the Mesa Center for the Arts at the southeast corner of Center Street and Main Street. Some structures located at the east end of the project area were no longer present by 2007.

City Directory Information

HDR reviewed city telephone directory information for the project site and surrounding area at the Burton Barr Phoenix Public Library. Directories were reviewed for the years between 1963 and 2009, in intervals of 5 years. The city directories contained information that confirmed the development and land use of the project site as indicated on the historical aerial photographs and during the site visit. The city directory search revealed 11 sites of concern not otherwise identified. The analysis of city directory information is not affected by the 2-lane or 4-lane option. However, distance from a potential station platform and/or TPSS was a factor in determining whether a city directory listing was considered to be of concern. Each of the service station sites listed below are considered to have an indeterminate risk based on a lack of regulatory listings and additional information, but still having likely contained USTs onsite. It has been the experience of HDR personnel that hydrocarbon contamination often exists in the soils surrounding USTs not otherwise classified as a LUST. One exception was noted (Thomas Gulf) where regulatory files were identified and reviewed. That site is considered high risk based on the details of the corresponding LUST case. The remaining auto repair facilities are considered low risk based on the handling of potentially hazardous materials onsite, but not likely within USTs. Appendix B includes figures depicting the specific station platform and/or TPSS (named in parentheses) affected by the site of concern.
- Shell Station (current Burger King) located at 1165 W. Main Street (Exhibit A-1, HDR Map Code A, Alma School Road station platform). Site listed in the city directory in the early 1960s.

- Auto Repair Facility located at 450 W. Main Street (Exhibits B-1, B-2, B-3, HDR Map Code F, Country Club Drive station platform). Site listed in the city directories from the late 1990s until present.

- MAACO located at 434 W. Main Street (Exhibits B-1, B-2, B-3, HDR Map Code G, Country Club Drive station platform). Site listed in the city directories from the mid-1970s until present.

- Shell Station (current vacant lot located at northwest corner of Country Club Drive/Main Street) located at 402 W. Main Street (Exhibits B-1, B-2, B-3, B-4, HDR Map Code H, Country Club Drive station platform). Site listed in the city directories from the mid-1960s until the mid-1980s.

- Former Service Station (current Salsitas) located at 311 W. Main Street (Exhibit B-4, HDR Map Code J, Country Club station platform [all platform configurations shown in Exhibits B-2 through B-4] and TPSS B-1). Site listed in city directories during the 1960s.

- Auto Repair Facility (current Lamaze class center) located at 236 W. Main Street (Exhibits B-4, HDR Map Code L, Country Club station platform [all platform configurations shown in Exhibits B-2 through B-4]). Site listed in the city directories during the 1960s.

- Union 76 Station (current Network Automotive) located at 104 E. Main Street (Exhibits C-1, C-2, HDR Map Code Q, Centennial Way station platform [all platform configurations shown in exhibits]). Site listed in the city directories from the early 1960s until the late 1970s.

- Union Oil (current office building) located at 361 E. Main Street (Exhibits D-1, D-2, HDR Map Code S, Mesa Drive platform station [all platform configurations shown in exhibits]). Site listed in the city directories from the early 1960s until the late 1970s.

- Wilky’s Machine Shop located at 402 E. Main Street (Exhibits D-1, D-2, HDR Map Code T, Mesa Drive station platform [all platform configurations shown in exhibits]). Site listed in city directories from the late 1980s until present.

- Thomas Gulf (current Auto Repair Facility) located at 405 E. Main Street (Exhibits D-1, D-2, HDR Map Code U, Mesa Drive station platform [all platform configurations shown in exhibits]). Site listed in city directories from early 1960s until the mid-1970s. Although the facility is not listed in the EDR report, a regulatory file review identified one LUST case at the site. According to the files, the case was closed in 1999; however residual levels TPH and PCE remained onsite. Based upon the potential for residual contamination in the area, additional investigation is recommended at this site.

- Auto Repair Facility located at 425 E. Main Street (Exhibits D-1, D-2, HDR Map Code W, Mesa Drive station platform [all platform configurations shown in exhibits] and TPSS C-1). Site listed in city directories in the mid-1970s.
Historical Topographic Maps

Historical topographic maps provide an overview of the area relative to potential previous land uses. HDR reviewed historical topographic maps of the project corridor and adjoining properties from Mesa, Arizona, 1952 (photorevised 1982). These maps served to verify the information gathered in the historic aerial photograph review.

4.4 Environmental Liens and Additional Information

No information regarding the chain-of-title ownership history or environmental liens recorded against the project area was provided by the user. Environmental lien searches were not conducted as part of the scope of work for this project.

4.5 Summary of Previous Environmental Investigations

No previous environmental investigations were reviewed for this ESA.

5.0 SITE RECONNAISSANCE AND INTERVIEWS

5.1 Site Reconnaissance

On November 10, 2009, HDR personnel conducted a site reconnaissance of the project area located along Main Street, from Sycamore Drive to just east of Hobson Road in Mesa, Maricopa County, Arizona. Land use within the project area consisted of the typical development often located within a downtown urban area. Development within the project area consisted of service stations, auto repair facilities, auto dealerships, mobile home parks, hotels and motels, shopping plazas, office buildings and other miscellaneous retail and commercial facilities. The East Valley Institute of Technology was located at the western end of the project area, south of Main Street and west of Alma School Road. The Mesa Arizona Temple is located at the eastern end of the project area, between Lesueur Drive and Hobson Road. The project area consisted of newly constructed structures as well as structures present since the 1950s. Intermittent areas of undeveloped lots were present where facilities were previously located. The site reconnaissance findings were not affected by the 2-lane or 4-lane option. However, distance from a potential station platform and/or TPSS was a factor in determining whether a site identified in during the visit was considered to be of concern. One site of concern was identified during the site reconnaissance. Gunnell’s Tire and Service located at 420 E. Main Street (Appendix B, Exhibits D-1, D-2, HDR Map Code V) is considered to be of low risk to the Mesa Drive station platform. No indications of large-scale, previous spills or hazardous material usage or disposal were identified at the project site. No pits, ponds, lagoons, or indications of buried waste were noted.

5.2 Interview

Based on the supporting information obtained during historical research and potential public sensitivities related to project, no interviews were performed for this ESA.
5.3 Known Current and Past Uses of the Site and Adjoining Properties

The project area consist of service stations, auto repair facilities, auto dealerships, mobile home facilities, hotels and motels, shopping plazas, office buildings and other miscellaneous retail and commercial facilities. The East Valley Institute of Technology was located at the western end of the project area, and the Mesa Arizona Temple was located at the eastern end of the project area. The surrounding area consists of similar retail and commercial development, and an increased concentration of residential development to the north and south of Main Street, as well as east of the project area. Historically, the project area’s development was similar to its current land use. Prior to the 1950s, some agricultural land was present at the western end of the project area.

5.4 Utilities

HDR did not observe indications of subsurface utilities other than typical municipal utilities such as water, sewer, electrical, and/or telecommunications cable.

6.0 DATA GAP ANALYSIS

The ASTM E 1527-05 standard requires a listing of “data gaps” encountered during the investigative process that may affect the validity of the conclusions drawn by the environmental professional. The ASTM E 1527-05 standard also requires that the environmental professional estimate the relative importance of the data gaps. Generally, gaps in available data are related to the availability of historical data sources for specific sites of concern. The environmental professional uses multiple historical data sources as a method to provide coverage for data gaps. Historical information is collected on a recurring basis, and the passage of time between data sets may or may not constitute a significant gap in data coverage. For this project, the following item may constitute a data gap as defined by ASTM:

- Lack of site-specific interviews

Based on the supporting historical information, and current planning stage of the project, the lack of site specific interviews is not considered a significant data gap.

7.0 FINDINGS AND CONCLUSIONS

HDR has conducted an ESA for the Central Mesa LRT Extension project’s LPA. The LPA is located along Main Street from Sycamore Drive to approximately Hobson Road in Mesa, Maricopa County, Arizona. The project area consists of the project’s design from Sycamore to Country Club as well as the two design options (a 2-lane and a 4-lane option) from Country Club to the eastern project terminus, potential locations for new station platforms, and the park-and-ride lots. In addition, potential locations for the project’s TPSS are also located within the project area. In order to account for each potential station platform and TPSS location, the project area and a one-half mile surrounding buffer were evaluated for the purposes of this ESA (see Figure 2). Land use within the project area consists of various generations of retail and commercial development, including several auto repair facilities, current and former service stations, auto dealerships, shopping centers, business offices, and other retail and commercial facilities. Land
use in the surrounding area is consistent with that of an urban (downtown) area, and appears to have been developed since at least the late 1950s.

This Phase I ESA identifies RECs for the project area that may adversely affect roadway/fixed guideway construction or project corridor right-of-way acquisition. Figures depicting each REC site, and other identified sites of concern, can be found in Appendices A and B. All identified sites are referenced with corresponding map codes within the text of this report. This ESA was conducted to generally conform with the scope and limitations of the American Society for Testing and Materials (ASTM) Practice E 1527-05. Any exceptions to or deletions from these ASTM practices are described later in this report.

This ESA includes a summary of the site reconnaissance conducted on November 10, 2009, a review of environmental databases, and a review of historical data sources.

The ESA process resulted in the following findings and conclusions:

- For the purposes of this ESA report, conclusions regarding potential sites of concern were not affected by the 2-lane or 4-lane design options. However, the location of potential station platforms and TPSS was a determining factor in identifying sites of concern. This determination was based on the increased amount of subsurface disturbance required for the construction of the station platforms and TPSS.

- **The EDR report identified 11 sites of concern to the project.** The analysis of the EDR database search is not affected by the 2-lane or 4-lane option. However, location of potential station platform and TPSS was a factor. Many of the sites listed in the EDR report were eliminated as sites of concern based on the distance from a potential station platform or TPSS. Only sites located within a 200-foot radius of a station platform or TPSS were considered to be of concern to the project. Based on the location and distance of a listed site, current status of the listing, and/or nature of the database, seven LUST sites and three additional UST sites were identified as sites of concern in the EDR report. One additional site with multiple database listings was identified in the report. Of the 11 sites identified in the EDR report, nine are considered to be RECs (seven LUST sites [Map Codes C, D, E, I, M, O and R] one facility with multiple regulatory listings [Map Code N] and one former dry cleaner [Map Code K]).

- Historical research (city directories and historic aerial photographs) of the project area identified 11 additional sites of concern. The analysis of historical research information is not affected by the 2-lane or 4-lane option. However, distance from a potential station platform and/or TPSS was a factor in determining whether a city directory listing was considered to be of concern. Of the 11 sites identified through historical research, one site, a former service station and current auto repair facility (Map Code U), is considered a REC.

- A site reconnaissance of the project area was performed for the project area. Development within the project area consisted of service stations, auto repair facilities, auto dealerships, mobile home parks, hotels and motels, shopping plazas, office buildings and other miscellaneous retail and commercial facilities. The project area consisted of newly constructed structures, as well as structures present since the at least the 1950s. The site reconnaissance findings were not affected by the 2-lane or 4-lane option. However, distance from a potential station platform and/or
TPSS was a factor in determining whether a site identified in during the visit was considered to be of concern. **One site of concern, a former service station not previously identified in the EDR report or historical research, was identified during the site reconnaissance (Map Code J).**

### 8.0 RECOMMENDATIONS

Recommendations included in this report have been developed through the investigative procedures described in the *Scope of Services, Significant Assumptions, and Limitations* section of this report. These findings should be reviewed within the context of the limitations provided in the *Scope of Services, Significant Assumptions, and Limitations* section. Based on the location and specific details of the identified risk sites, HDR has identified REC sites associated with the project area. This conclusion has led to the inclusion of the following statement as required by ASTM E 1527-05:

HDR has performed an ESA in general conformance with the scope and limitations of ASTM E 1527-05 of the project area located along Main Street, from Sycamore Drive to approximately Hobson Road in Mesa, Maricopa County, Arizona. Any exceptions to or deletions from these practices are described in later sections of this report. **This report has revealed the evidence of ten RECs in connection with 23 sites of concern located in the project area.** The following table identifies each of the 23 sites of concern, with the REC sites in bold print.

#### TABLE 2: SITES OF CONCERN

</table>

Sites listed in bold print are considered by ASTM to be Recognized Environmental Concerns (RECs)

1. Corresponds to location of site as indicated in Appendices A and B
2. CSS = Current Service Station, FSS= Former Service Station, HSS = Historic Service Station (no longer present)
3. LUST=Leaking Underground Storage Tank, UST= Underground Storage Tank. Complete list of acronyms identified in EDR report in Appendix C
4. Indicates primary information sources for listing: R=Reconnaissance, D=Database, H=Historical Source (city Directories, historical aerial photographs)
5. Risk of potential impacts onsite, Low / Medium / High / Indeterminate
6. PSI= Preliminary Site Investigation
7. SP= Station Platform, TPSS= Traction Powered Substation. See Appendix B for specific structure

Based on the findings and conclusions reached in this report, HDR makes the following recommendations.

**Recommendation 1:**

HDR recommends further investigation (in the form of a Preliminary Site Investigation) at seven of the ten REC sites. Additional investigation for these sites is based on the location of known or suspected contamination and/or other details associated with the site’s regulatory listing. A drilling and sampling program should be implemented to verify or refute the existence of actionable concentrations of released hazardous materials. A specific and targeted analytical program should be implemented to determine the concentration of residual impacts, if present.

**Recommendation 2:**

HDR recommends that ECM be conducted along the entire length of project area based on the potential for contamination within the soil resulting from the operations of the facilities surrounding the project area. Additionally, all construction contractors should be instructed to immediately stop all subsurface activities in the event that potentially hazardous materials are encountered, an odor is identified, or significantly stained soil is visible. Contractors should be instructed to follow all applicable regulations regarding discovery and response for hazardous materials encountered during the construction process.
9.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

9.1 Signatures and Qualifications

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in Section 312.10 of 42 C.F.R. Part 312. This Phase I ESA was conducted under the supervision of a qualified environmental professional.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the AAI in conformance with standards and practices set forth in 40 C.F.R. Part 312.

The preceding report has been prepared in general conformance with standard industry practice for performance of ESAs, and includes the applicable portions of the investigation procedures codified in ASTM E 1527-05, *Standard Practice for Environmental Site Assessments: Environmental Site Assessment Process*. The end user of this report may rely on the contents, findings, and conclusions to be accurate within the limitations stated in this report and in the ASTM standard. The report also complies with specific requirements supplied by the client.

Senior Professional Associate

Qualifications of Environmental Professionals

This Phase I ESA was performed by the following HDR employee.

Ms. Colleen Murray, HDR’s qualified environmental professional, as defined by ASTM Practice E 1527-05, has more than 5 years of experience in the assessment of impacted properties and compliance with environmental regulations. She has a Bachelor’s degree in Organizational Studies from Arizona State University and is currently pursuing a Master’s degree in Environmental and Emergency Management. Ms. Murray’s experience includes environmental health and safety, industrial hygiene, emergency response, and the submittal of various state and federally required reports and permits.

Qualifications of QA/QC Review Professionals

Reviews for quality assurance and quality control were performed by the following HDR employee.

Mr. Kelly W. Kading, CPG, CHMM, a qualified assessor as defined by the Arizona Department of Transportation and an environmental professional as defined by ASTM E 1527-05, has more than 21 years of experience in assessment and remediation of impacted properties and compliance with environmental regulations. He has a B.S. in Geology from Colorado State University and is a Certified Professional Geologist (#9173), and a Certified Hazardous Materials Manager (#1995). He specializes in forensic investigation of hazardous materials-impacted properties for municipal and state agencies, as well as commercial clients. His experience covers assessment of more than 3,000 properties ranging from agricultural land to multigenerational industrial properties in 34 states and 2 foreign countries. He is highly...
knowledgeable of federal, state, and local environmental regulations and standards and has served on the National Board of Directors of the Academy of Certified Hazardous Materials Managers.

SURROUNDING SITES: SEARCH RESULTS
Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS
CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 18 CERC-NFRAP sites within the searched area.

EXECUTIVE SUMMARY

RCRA-TSDF: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-TSDF site within the searched area.

RCRA-LQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-LQG site within the searched area.

RCRA-SQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are 11 RCRA-SQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 11/12/2008 has revealed that there are 22 RCRA-CESQG sites within the searched area.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 11/12/2008 has revealed that there are 64 RCRA-NonGen sites within the searched area.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 2 HIST FTTS sites within the searched area.

STATE AND LOCAL RECORDS

SHWS: The State Hazardous Waste Sites records are the states’ equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Quality’s ZipAcids database.

A review of the SHWS list, as provided by EDR, and dated 01/03/2000 has revealed that there are 19 SHWS sites within the searched area.

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Quality’s Arizona UST-DMS Facility and Tank Data Listing by City database.

A review of the UST list, as provided by EDR, and dated 01/04/2009 has revealed that there are 85 UST sites within the searched area.

SPILLS: The ADEQ Emergency Response unit documents chemical spills and incidents that are referred to the Unit. The logbook information for 1984-1986 consists of handwritten entries of the date, incident number and name of facility if known. Current logbooks are computerized and can be sorted by date, incident number, name, city (zip codes are not included), county, chemical and quantity. The sources is the Department of Environmental Quality’s Hazardous Material Logbook.

A review of the SPILLS list, as provided by EDR, and dated 11/15/2001 has revealed that there are 19 SPILLS sites within the searched area.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within the searched area.

Classification: Conditionally Exempt Small Quantity Generator
Description: Handler: generates 100 kg or less of hazardous waste per calendar
month, and accumulates 1000 kg or less of hazardous waste at any time;
or generates 1 kg or less of acutely hazardous waste per calendar
month, and accumulates at any time: 1 kg or less of acutely hazardous
waste; or 100 kg or less of any residue or contaminated soil, waste or
other debris resulting from the cleanup of a spill, into or on any
CITY OF MESA - POLICE CRIME LAB (Continued)

land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:
- U.S. importer of hazardous waste: Unknown
- Mixed waste (haz. and radioactive): Unknown
- Recycler of hazardous waste: Unknown
- Transporter of hazardous waste: Unknown
- Treater, storer or disposer of HW: Unknown
- Underground injection activity: Unknown
- On-site burner exemption: Unknown
- Furnace exemption: Unknown
- Used oil fuel burner: Unknown
- Used oil processor: Unknown
- User oil refiner: Unknown
- Used oil fuel marketer to burner: Unknown
- Used oil Specification marketer: Unknown
- Used oil transfer facility: Unknown
- Used oil transporter: Unknown
- Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:
- Waste code: D001
  - Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code: D002
  - Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DECREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- Waste code: D003
  - Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

- Waste code: D004
  - Waste name: ARSENIC

Violation Status: No violations found

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

### Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

**Hazardous Waste Summary:**
- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AZURITE (Arizona Unified Repository For Informational Tracking Of The Environment) is the Arizona Department of Environmental Quality (ADEQ) database that is used for environmental enforcement and compliance reporting to the Permit and Compliance (PCS) system and to the Air Facility System Universal Interface (AFS-UI).

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

SDWIS [WS] (Safe Drinking Water Information System (Water System) ). Water Systems can have one or more water system facilities. The water system will purchase water from several facilities. Drinking water information is stored in EPA’s SDWIS, which contains information about public water systems and their violations of EPA’s regulations for safe drinking water. These statutes and accompanying regulations establish maximum contaminant levels (MCL), treatment techniques, and monitoring and reporting requirements to ensure that water provided to customers is safe for human consumption.

Hazardous Waste Summary:
- **Waste code:** D001

land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.
IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE GUNPOWDER.

No violations found

Site name: MUSD 4 PUR OPER E VALLEY ACADEMY AND TAP
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS IDENTIFIED AS A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS OFTEN USED IN INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE BY WASTE GUNPOWDER.

Hazardous Waste Summary:

- **Waste code:** D001
  - **Waste name:** IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- **Waste code:** D005
  - **Waste name:** BARIAH

- **Waste code:** D007
  - **Waste name:** CHROMIUM

- **Waste code:** D008
  - **Waste name:** LEAD

- **Waste code:** D035
  - **Waste name:** METHYL ETHYL KETONE

- **Waste code:** F003
  - **Waste name:** THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- **Waste code:** F005
  - **Waste name:** THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**Violation Status:** No violations found

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.
It Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System. It is used to support implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
UNDER PRESSURE PERSONAL SECURITY PRODUCTS INC  (Continued) 1004437974

Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Historical Generators:
- Date form received by agency: 01/10/2000
- Facility name: DURA SWITCH
- Classification: Conditionally Exempt Small Quantity Generator

- Date form received by agency: 08/16/1985
- Facility name: DURA SWITCH
- Classification: Not a generator, verified

Hazardous Waste Summary:
- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

MESA CITY OF BROOKS STREET RESERVOIR (Continued) 1005904242

Handler Activities Summary:
- U.S. importer of hazardous waste: Unknown
- Mixed waste (haz. and radioactive): Unknown
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: Unknown
- Furnace exemption: Unknown
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No
- Off-site waste receiver: Commercial status unknown

Historical Generators:
- Date form received by agency: 02/27/2006
- Facility name: MESA CITY OF BROOKS STREET RESERVOIR
- Classification: Not a generator, verified

- Date form received by agency: 07/17/2002
- Facility name: MESA CITY OF BROOKS STREET RESERVOIR
- Classification: Small Quantity Generator

Hazardous Waste Summary:
- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

- **Contact country:** Not reported
- **Contact telephone:** (480) 834-1565
- **Contact email:** Not reported
- **EPA Region:** 09
- **Land type:** Facility is not located on Indian land. Additional information is not known.
- **Classification:** Large Quantity Generator
- **Description:** Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

### Handler Activities Summary:
- **U.S. importer of hazardous waste:** Unknown
- **Mixed waste (haz. and radioactive):** Unknown
- **Recycler of hazardous waste:** Unknown
- **Transporter of hazardous waste:** Unknown
- **Treater, storer or disposer of HW:** Unknown
- **Underground injection activity:** Unknown
- **On-site burner exemption:** Unknown
- **Furnace exemption:** Unknown
- **Used oil fuel burner:** Unknown
MASTERCRAFT CABINETS (Continued)

Used oil processor: Unknown
User oil refiner: Unknown
Used oil fuel marketer to burner: Unknown
Used oil Specification marketer: Unknown
Used oil transfer facility: Unknown
Used oil transporter: Unknown
Off-site waste receiver: Commercial status unknown

Biennial Reports:
Last Biennial Reporting Year: 2007

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 124127

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 108219

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 131227

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 131227

Facility Has Received Notices of Violations:
Regulation violated: Not reported
Area of violation: Universal Waste - Small Quantity Handlers
Date violation determined: 07/22/2008

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
MAP FINDINGS

MUSD 4 PUR OPER FRANKLIN W ELEMENTARY (Continued) 1004674988

| Waste name: | A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: | D003

Violation Status: | No violations found

<tbody>
<tr>
<td>D001</td>
<td>IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.</td>
<td></td>
</tr>
<tr>
<td>D002</td>
<td>A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.</td>
<td></td>
</tr>
<tr>
<td>D003</td>
<td>A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.</td>

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).
from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;
Incident Tracking, Compliance Assistance, and Compliance Monitoring.

</table>
To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### FEDERAL RECORDS

**NPL:** National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA’s Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

- **Date of Government Version:** 06/29/2009
- **Date Data Arrived at EDR:** 07/31/2009
- **Date Made Active in Reports:** 09/21/2009
- **Number of Days to Update:** 52
- **Source:** EPA
- **Telephone:** N/A
- **Last EDR Contact:** 10/14/2009
- **Next Scheduled EDR Contact:** 01/25/2010
- **Data Release Frequency:** Quarterly

**Proposed NPL:** Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

- **Date of Government Version:** 06/29/2009

**DELISTED NPL:** National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/30/2009
Date Data Arrived at EDR: 08/11/2009
Date Made Active in Reports: 09/21/2009
Number of Days to Update: 41

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/23/2009
Date Data Arrived at EDR: 09/02/2009
Date Made Active in Reports: 09/21/2009
Number of Days to Update: 19

LIENS 2: CERCLA Lien Information

A Federal CERCLA (‘Superfund’) lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 08/18/2009
Date Data Arrived at EDR: 08/21/2009
Date Made Active in Reports: 09/21/2009
Number of Days to Update: 31

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 06/30/2009
Date Data Arrived at EDR: 07/01/2009
Date Made Active in Reports: 09/29/2009
Number of Days to Update: 82

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.
RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.
US ENG CONTROLS: Engineering Controls Sites List
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/31/2009  
Date Data Arrived at EDR: 04/22/2009  
Date Made Active in Reports: 05/05/2009  
Number of Days to Update: 13  
Next Scheduled EDR Contact: 12/28/2009  
Data Release Frequency: Varies

Source: Environmental Protection Agency  
Telephone: 703-603-0695

US INST CONTROL: Sites with Institutional Controls
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/31/2009  
Date Data Arrived at EDR: 04/22/2009

Data Release Frequency: Varies

Source: Department of Transportation, Office of Pipeline Safety  
Telephone: 202-366-4595

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.
US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA’s Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities—especially those without EPA Brownfields Assessment Demonstration Pilots—minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA’s Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients—States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

DOD: Department of Defense Sites
This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

FUDS: Formerly Used Defense Sites
The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

LUCIS: Land Use Control Information System
LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

CONSENT: Superfund (CERCLA) Consent Decrees
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.
ROD: Records Of Decision
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 09/01/2009  Source: EPA
Date Data Arrived at EDR: 09/22/2009  Telephone: 703-416-0223

Number of Days to Update: 30  Next Scheduled EDR Contact: 12/28/2009
Data Release Frequency: Annually

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 01/05/2009  Source: Department of Energy
Date Data Arrived at EDR: 05/07/2009  Telephone: 505-845-0011
Date Made Active in Reports: 05/08/2009  Last EDR Contact: 09/14/2009
Number of Days to Update: 1  Next Scheduled EDR Contact: 12/14/2009
Data Release Frequency: Varies

ODI: Open Dump Inventory
An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

Date of Government Version: 06/30/1985  Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/09/2004  Telephone: 800-424-9346
Date Made Active in Reports: 09/17/2004  Last EDR Contact: 06/09/2004
Number of Days to Update: 39  Next Scheduled EDR Contact: N/A
Data Release Frequency: No Update Planned

DEBRIS REGION 9: Torres Martinez Reservation Illegal Dump Site Locations
A listing of illegal dump sites location on the Torres Martinez Indian Reservation located in eastern Riverside County and northern Imperial County, California.

Date of Government Version: 01/12/2009  Source: EPA, Region 9
Date Data Arrived at EDR: 05/07/2009  Telephone: 415-972-3336
Date Made Active in Reports: 09/21/2009  Last EDR Contact: 09/23/2009
Number of Days to Update: 137  Next Scheduled EDR Contact: 12/21/2009
Data Release Frequency: Varies

MINES: Mines Master Index File
Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 05/28/2009  Source: Department of Labor, Mine Safety and Health Administration
Date Data Arrived at EDR: 06/23/2009  Telephone: 303-231-5859
Date Made Active in Reports: 09/21/2009  Last EDR Contact: 09/18/2009
Number of Days to Update: 90  Next Scheduled EDR Contact: 12/21/2009
Data Release Frequency: Semi-Annually

TRIS: Toxic Chemical Release Inventory System
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.
TSCA: Toxic Substances Control Act
TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSPI: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.
**SSTS: Section 7 Tracking Systems**

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

**ICIS: Integrated Compliance Information System**

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

**PADS: PCB Activity Database System**

PCB Activity Database. PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCB’s who are required to notify the EPA of such activities.

**MLTS: Material Licensing Tracking System**

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

**RADINFO: Radiation Information Database**

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.
FINDS: Facility Index System/Facility Registry System

FINDS: Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 07/23/2009

Next Scheduled EDR Contact: 12/28/2009
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

WQARF: Water Quality Assurance Revolving Fund Sites
Sites which may have an actual or potential impact upon the waters of the state, cause by hazardous substances. The WQARF program provides matching funds to political subdivisions and other state agencies for clean-up activities.

SPL: Superfund Program List
The list is representative of the sites and potential sites within the jurisdiction of the Superfund Program Section. It is comprised of the following elements: 1) Water Quality Assurance Revolving Fund Registry Sites; 2) Potential WQARF Registry sites; 3) NPL sites; and 4) Department of Defense sites requiring SPS oversight.

SHWS: ZipAcids List
The ACIDS list consists of more than 750 locations subject to investigation under the State Water Quality Assurance Revolving Fund (WQARF) and Federal CERCLA programs. The list is no longer updated by the state.

SWF/LF: Directory of Solid Waste Facilities
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

SWTIRE: Solid Waste Tire Facilities
A waste tire "facility" means a solid waste facility at which waste tires are stored outdoors on any day.
GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

**AUL: DEUR Database**

Activity and use limitations include both engineering controls and institutional controls. DEUR and VEMUR sites.

DEUR: Declaration of Environmental Use Restriction. A restrictive land use covenant that is required when a property owner elects to use an institutional (i.e., administrative) control or engineering (i.e., physical) control as a means to meet remediation goals. The DEUR runs with and burdens the land, and requires maintenance of any institutional or engineering controls. VEMUR: Voluntary Environmental Mitigation Use Restriction. A restrictive land use covenant that, prior to July 18, 2000, was required when a property owner elected to remediate the property to non-residential uses. Effective July 18, 2000, the DEUR replaced the VEMUR as a restrictive use covenant.

Next Scheduled EDR Contact: 02/15/2010
Data Release Frequency: Semi-Annually

INDIAN UST R5: Underground Storage Tanks on Indian Land
The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 5 (Michigan, Minnesota and Wisconsin and Tribal Nations).

Date of Government Version: 09/08/2008
Date Data Arrived at EDR: 09/19/2008
Date Made Active in Reports: 10/16/2008
Number of Days to Update: 27

Source: EPA Region 5
Telephone: 312-886-6136
Last EDR Contact: 10/22/2009
Next Scheduled EDR Contact: 11/16/2009
Data Release Frequency: Varies

INDIAN UST R8: Underground Storage Tanks on Indian Land
The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 8 (Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming and 27 Tribal Nations).

Date of Government Version: 08/24/2009
Date Data Arrived at EDR: 09/10/2009
Date Made Active in Reports: 10/22/2009
Number of Days to Update: 42

Source: EPA Region 8
Telephone: 303-312-6137
Last EDR Contact: 10/30/2009
Next Scheduled EDR Contact: 02/15/2010
Data Release Frequency: Quarterly
INDIAN UST R1: Underground Storage Tanks on Indian Land
The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 1 (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont and ten Tribal Nations).

Date of Government Version: 02/19/2009  Source: EPA, Region 1
Date Data Arrived at EDR: 02/19/2009  Telephone: 617-918-1313
Date Made Active in Reports: 03/16/2009  Last EDR Contact: 10/30/2009
Number of Days to Update: 25  Next Scheduled EDR Contact: 02/15/2010
Data Release Frequency: Varies

INDIAN UST R7: Underground Storage Tanks on Indian Land
The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 7 (Iowa, Kansas, Missouri, Nebraska, and 9 Tribal Nations).

Date of Government Version: 04/01/2008  Source: EPA Region 7
Date Data Arrived at EDR: 12/30/2008  Telephone: 913-551-7003
Date Made Active in Reports: 03/16/2009  Last EDR Contact: 08/21/2009
Number of Days to Update: 76  Next Scheduled EDR Contact: 11/16/2009
Data Release Frequency: Varies

INDIAN UST R9: Underground Storage Tanks on Indian Land
The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 9 (Arizona, California, Hawaii, Nevada, the Pacific Islands, and Tribal Nations).

Date of Government Version: 08/21/2009  Source: EPA Region 9
Date Data Arrived at EDR: 08/26/2009  Telephone: 415-972-3368
Date Made Active in Reports: 10/22/2009  Last EDR Contact: 10/30/2009
Number of Days to Update: 57  Next Scheduled EDR Contact: 02/15/2010
Data Release Frequency: Quarterly

INDIAN VCP R1: Voluntary Cleanup Priority Listing
A listing of voluntary cleanup priority sites located on Indian Land located in Region 1.

Date of Government Version: 04/02/2008  Source: EPA, Region 1
Date Data Arrived at EDR: 04/22/2008  Telephone: 617-918-1102
Date Made Active in Reports: 05/19/2008  Last EDR Contact: 10/05/2009
Number of Days to Update: 27  Next Scheduled EDR Contact: 01/18/2010
Data Release Frequency: Quarterly

INDIAN VCP R7: Voluntary Cleanup Priority Listing
A listing of voluntary cleanup priority sites located on Indian Land located in Region 7.

Date of Government Version: 03/20/2008  Source: EPA, Region 7
Date Data Arrived at EDR: 04/22/2008  Telephone: 913-551-7365
Date Made Active in Reports: 05/19/2008  Last EDR Contact: 04/20/2009
Number of Days to Update: 27  Next Scheduled EDR Contact: 07/20/2009
Data Release Frequency: Varies

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.
OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**CT MANIFEST: Hazardous Waste Manifest Data**
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.
- **Date of Government Version:** 12/31/2007
- **Date Data Arrived at EDR:** 08/26/2009
- **Date Made Active in Reports:** 09/11/2009
- **Number of Days to Update:** 16
- **Source:** Department of Environmental Protection

**WI MANIFEST: Manifest Information**
Hazardous waste manifest information.
- **Date of Government Version:** 12/31/2008
- **Date Data Arrived at EDR:** 07/17/2009
- **Date Made Active in Reports:** 08/10/2009
- **Number of Days to Update:** 24
- **Source:** Department of Natural Resources
- **Telephone:** N/A
- **Last EDR Contact:** 09/24/2009
- **Next Scheduled EDR Contact:** 01/04/2010
- **Data Release Frequency:** Annually

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

**AHA Hospitals:**
- **Source:** American Hospital Association, Inc.
- **Telephone:** 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association’s annual survey of hospitals.
Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Care Facilities & Group Homes
Source: Department of Health Services
Telephone: 602-674-4220

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Riparian Vegetation Associated with Perennial Waters
Source: State Land Department
Telephone: 602-542-4094

Sites listed in bold print are considered by ASTM to be Recognized Environmental Concerns (RECs)

(1) Corresponds to location of site as indicated in Appendices A and B
(2) Address corresponds to that listed in EDR database search or historical source that identified site. Given address may differ slightly from currently listed address.
(3) CSS = Current Service Station, FSS= Former Service Station, HSS = Historic Service Station (no longer present)
(4) LUST=Leaking Underground Storage Tank, UST= Underground Storage Tank. Complete list of acronyms identified in EDR report in Appendix C
(5) Indicates primary information sources for listing: R=Reconnaissance, D=Database, H=Historical Source (cityDirectories, historical aerial photographs)
(6) Risk of potential impacts onsite, Low / Medium / High / Indeterminate
(7) PSI= Preliminary Site Investigation
(8) SP= Station Platform, TPSS= Traction Powered Substation. See Appendix B for specific structure

DISCLAIMER: The data provided on the Site Data Forms, including the “Impact Probability” and “Risk to the Project” sections, should not be considered as an independent summary of the entire contents of the ISA report. The Site Data Forms are intended to assist the client in making judgments about risk of contamination to the specific project, and include subjective judgments and observations specific to the site, the assessor, and the ISA process. The final judgment of risk, and appropriate action relating to the information provided in the ISA report, is solely that of the client. The information provided in the ISA is limited to observable, obtainable public information and the interpretation of that information by the assessor. Final judgments of business risk cannot be made by the assessor, only by the owner of the project.

DISCLAIMER: The data provided on the Site Data Forms, including the “Impact Probability” and “Risk to the Project” sections, should not be considered as an independent summary of the entire contents of the ISA report. The Site Data Forms are intended to assist the client in making judgments about risk of contamination to the specific project, and include subjective judgments and observations specific to the site, the assessor, and the ISA process. The final judgment of risk, and appropriate action relating to the information provided in the ISA report, is solely that of the client. The information provided in the ISA is limited to observable, obtainable public information and the interpretation of that information by the assessor. Final judgments of business risk cannot be made by the assessor, only by the owner of the project.
